TEAR FERN RESEARCH PROJECT

Are you aged 18-45 years old, in good general and eye health, and do not use eye drops on a regular basis or wear contact lenses?

If you answered YES, then you are invited to participate in a study being conducted at the School of Optometry and Vision Science at the University of New South Wales. The study will include 3 x 45 min visits to the UNSW ANT Lab in which your tears will be analysed using the LipiView®, Oculus® Keratograph and then collected for tear ferning analysis to see how eye drops affect the tear fern pattern.

You will be reimbursed for your time associated with the research study. You will be allocated a $10 credit on a Coles Group & Myer Gift Card for each session you attend (3 sessions in total).
