Researchers at The University of New South Wales and the School of Optometry and Vision Science are seeking up to 18 people with dry eye to compare the clinical benefits of SYSTANE ULTRA Lubricant Eye Drops when administered proactively (as a fixed regimen) versus reactively (as needed). This study is being sponsored by Alcon Research, Ltd.

The study may be a good fit for you if:

You are 18 years of age or above; you experience dry eye symptoms; you have used artificial tear drops at least once a week on an as needed basis; you do not wear contact lenses or are willing to stop wearing them during the study; you have not used your eye drops for dry eye more than 4 times a day in the last 12 months; you are not pregnant or lactating; you have not had any eye surgery or serious eye injury in the last 6 months.

If you decide to take part, there will be 3 visits over approximately 6 weeks. Each visit (which takes up to 1.5 hours), the health of your eyes will be checked and you will be asked to complete questionnaires about your eye symptoms. You will be compensated $20 per visit for travel costs.

HREC Approval No.
Study No. EXC120-P001. Version 2.0 dated 29th May 2015
