A two comparator, controlled phase 3 study of OM3 Tear formulation versus OPTIVE ADVANCED Unit Dose and OPTIVE Unit Dose eye drops in patients with and without evaporative dry eye

Do you have dry eyes?

Optometry and Vision Science
THE UNIVERSITY OF NEW SOUTH WALES

Researchers at UNSW Australia (The University of New South Wales) and the School of Optometry and Vision Science are seeking volunteer research participants to learn about the effect of a new Omega 3 Tear supplement on the tear film of the eye, and how long-lasting these effects are compared to two other commercially available eye drops.

Would the research project be a good fit for me?

The study might be a good fit for you if you:

- are over 18 years of age;
- have symptoms of dry eye;
- have not worn contact lenses in the past 3 months;
- have not had eye surgery in the last 6 months, and have never undergone LASIK/LASEK surgery;
- do not have epilepsy or migraines exacerbated by strobe-like flashing lights;
- are willing to use the study eye drops and comply with the study visit schedule.

What would happen if I took part in the research project?

If you decide to take part you would:

- be asked to attend a minimum of 7 visits and up to 10 visits (maximum) over approx. 18 weeks;
- be given eye drops to use on a daily basis;
- be asked to undergo evaluations similar to those at a regular optometrist visit, and complete questionnaires about your eye comfort and eye drop usage.

Will I be paid to take part in the research project?

Eye drops will be provided free of charge during the study and you will be compensated with a $20 or $30 gift card per visit for travel costs (amount is visit dependent).

Who do I contact if I want more information or want to take part in the study?

If you would like more information or are interested in being part of the study, please contact:
